All Weather Roofing for Bowling Greens

Increase revenue and reduce operating costs with a Spantech roof

Spantech provides a revolutionary light weight steel roofing system.

Spantech has designed and constructed distinctive curved roofs over sporting facilities such as Olympic swimming pools, tennis courts, basketball and netball courts for over twenty years.

The Spantech Construction System is ideally suited to bowling green roofing.

Guaranteed to last longer than shade sails, a Spantech roof has the lowest

whole of life cost of any bowling green roof currently on offer.

The benefits of a Spantech bowling green roof include:

- solid, dependable steel roof
- material is 1.2mm thick, more than twice a normal Colorbond steel roof
- up to a 25 year warranty
- minimal maintenance
- abundant, even natural light
- fully engineered
- complies with the Building Code of Australia
- can support loads at any point.

Buildings are individually designed and engineered to suit the Club's needs. Some of the options include:

- fixed seating

- café blinds
- insulated acoustic ceiling
- energy efficient lighting
- solar panels
- water tanks above or below ground
- the building can be fully enclosed

Spantech roofs are distinctly different from shade sails. Spantech buildings:

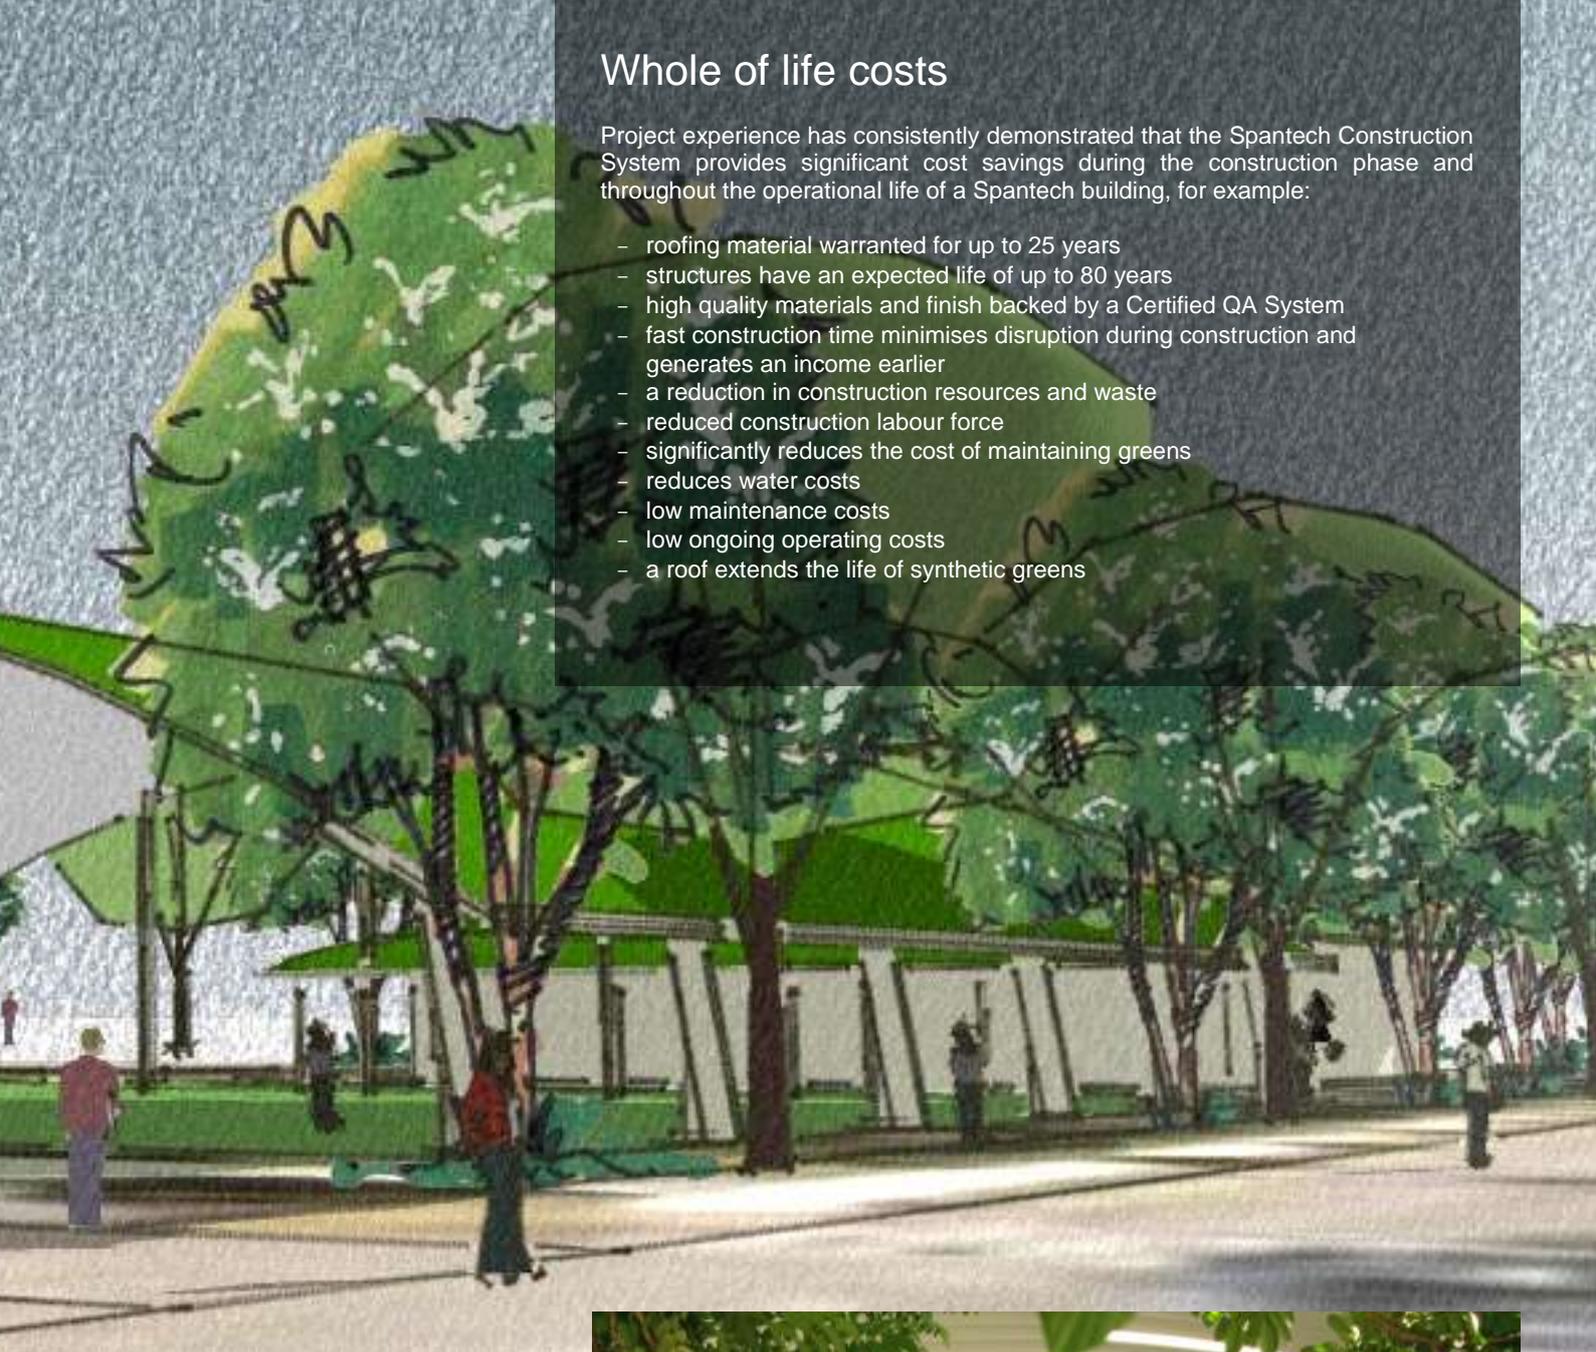

- are extremely cool and well ventilated
- have an expected life of 80 years
- are hail and flame proof
- can be cyclone rated
- have no areas for birds to nest
- have no light loss through the fabric so reflected lighting is more efficient

Some clubs lose thousands of dollars in fees and associated revenue when play

Whole of life costs

Project experience has consistently demonstrated that the Spantech Construction System provides significant cost savings during the construction phase and throughout the operational life of a Spantech building, for example:

- roofing material warranted for up to 25 years
- structures have an expected life of up to 80 years
- high quality materials and finish backed by a Certified QA System
- fast construction time minimises disruption during construction and generates an income earlier
- a reduction in construction resources and waste
- reduced construction labour force
- significantly reduces the cost of maintaining greens
- reduces water costs
- low maintenance costs
- low ongoing operating costs
- a roof extends the life of synthetic greens

is cancelled or affected by weather. Some of the benefits of providing a roof over at least one green may include:

- protecting players from all weather, ensuring comfort and more play
- guaranteed play improves revenue from green fees, bar, restaurant, gaming and functions
- enhancing the player experience - happy players stay longer and spend more
- eliminating dew on the green so hours of play can be extended
- the facility can also:
 - create a point of difference to help increase membership
 - attract and host major events
 - attract high-value bookings for corporate and social functions
 - attract younger players and school groups who are sun conscious
 - use a drop-in floor to convert the green to a functions venue.

Northpine Christian College
Double Basketball Court Cover

Spantech's All Weather Bowling Green Roofs are based on the design of the Spantech Shade Structures used extensively by Councils and schools for basketball court covers, swimming pool enclosures and indoor sports centres.
