

All Weather Roofing for
Equestrian Centres

COVERED RIDING ARENA
Arundel Park RDA, Gold Coast, Qld
Constructed 1987

All Weather Roofing for Equestrian Centres

Improve comfort for riders, horses and spectators while increasing revenue and reducing costs

Spantech provides a revolutionary light weight steel roofing system that can span up to 40 metres wide.

Spantech has designed and constructed distinctive curved roofs over sporting facilities such as Olympic swimming pools, tennis courts, basketball and netball courts for over twenty-five years.

The Spantech Construction System is also ideally suited to Equestrian Centres.

Guaranteed to last longer than shade sails and more aesthetically pleasing than a portal framed shed, a Spantech roof also has an extremely low whole-of-life cost.

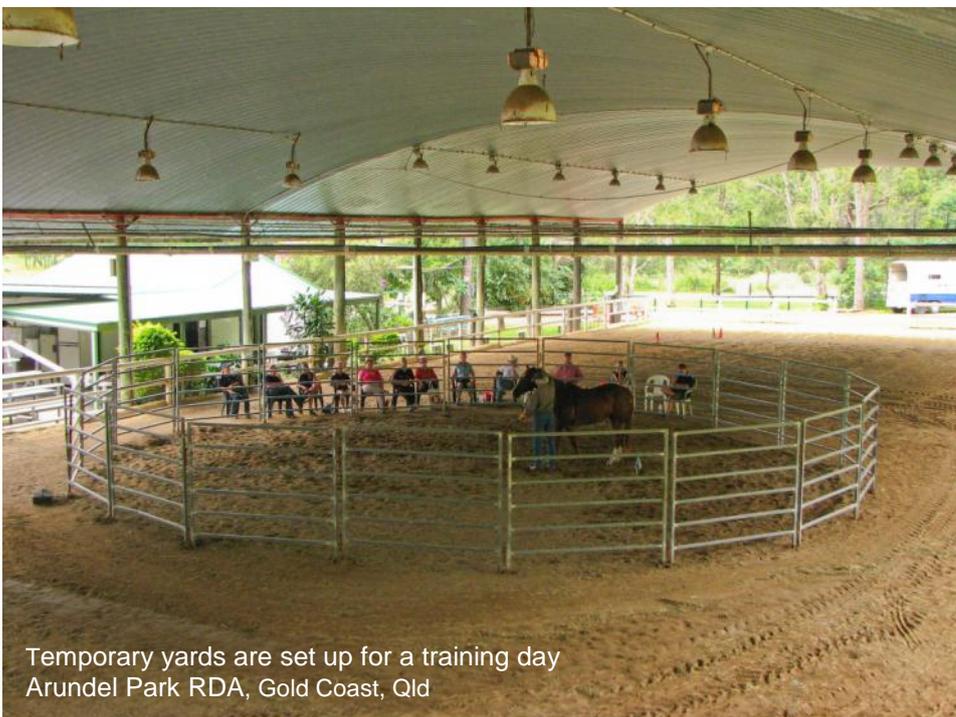

The benefits of a Spantech roof include:

- solid, dependable steel roof
- material is 1.2mm thick, more than twice a normal Colorbond steel roof
- up to a 25 year warranty
- minimal maintenance
- an abundance of natural light
- fully engineered
- complies with the BCA
- can support loads at any point.

Buildings are individually designed and engineered to suit the Client's needs.

Some of the options include:

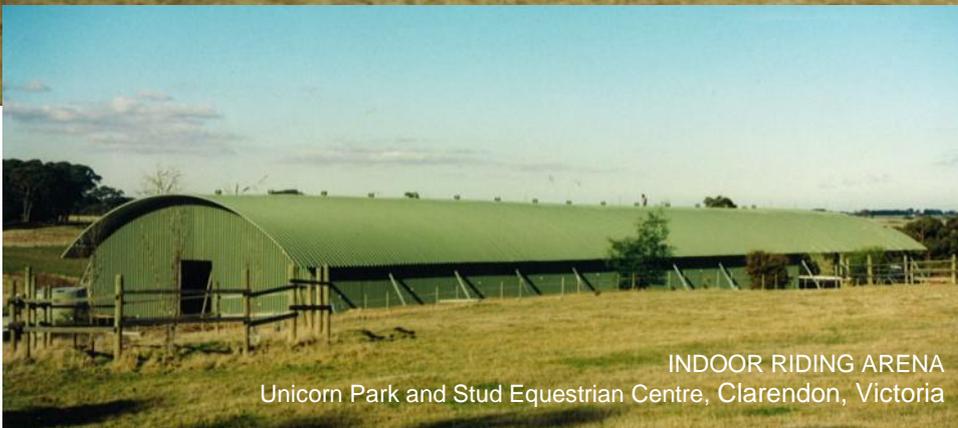

- overhead watering system to ensure a dust free environment
- efficient lighting for night riding
- grandstands or temporary seating
- insulated acoustic ceiling
- solar panels
- water tanks above or below ground

Temporary yards are set up for a training day

Unicorn Park and Stud Equestrian Centre, Clarendon, Victoria

Spantech roofing can be used as a shade structure with no walls and generous eaves (as *pictured left*), or be incorporated into a fully enclosed building (*above*).

Spantech buildings:

- are extremely cool and well ventilated
- have an expected life of 80 years
- are hail and flame proof
- can be cyclone rated
- have no areas for birds to nest

The obvious benefit of a Spantech roof is the significant improvement in comfort for riders, horses and spectators because the arena is protected from the extremes of weather.

Cancelling an event due to rain or extreme heat is avoided, eliminating disappointment and costly rescheduling.

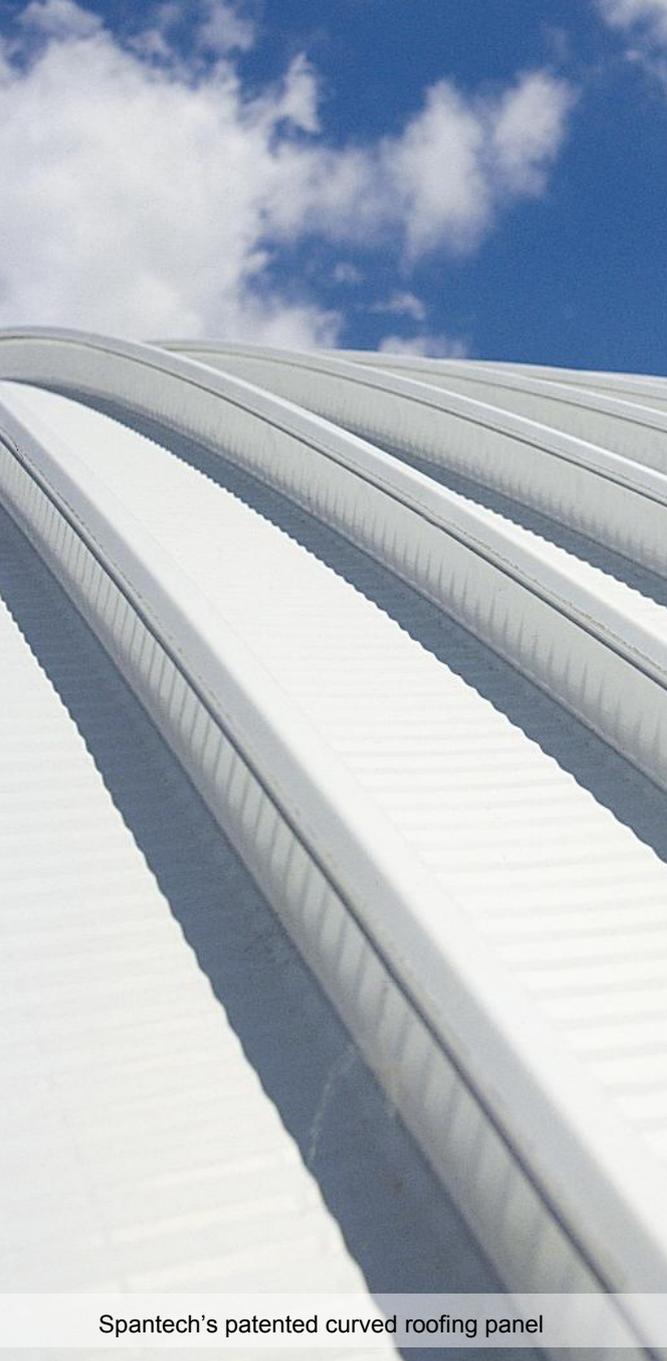

However, Spantech clients have also found some unexpected benefits from the all weather protection:

- horse performance and behaviour can improve
- operating hours can be extended
- increased membership for pony clubs
- attract and host major events
- attract high-value bookings from corporate, social or school groups
- drop-in floor can convert the arena to a functions venue
- more consistent cash flow.

Whole of Life

The Spantech Construction System provides significant cost savings during the construction phase and throughout the operational life of the Spantech building, for example:

- up to 25 year warranty
- long life
- high quality materials
- fast construction time
- minimal disruption during construction
- reduction in construction resources and waste
- reduced construction labour force
- reduces the cost of maintaining the arena surface
- water harvesting reduces water costs
- low maintenance costs
